

# My First Sum Book (My sum books)

## Q2: Function and operator overloading Book+ (20 points)

In the given program (project 6), we can add books with same name and they can be in different or same library. In Main.cpp, write a function `int totalBooks(string name)` to search for book 'name' and display the sum of number of books named 'name'.

2.1 For adding the number of books, use operator+ overloading. You need to write 2 operator+ overloading functions of Book class: The first function takes in Book object as input parameter and returns sum of number of books of 'this' object and number of books of input object. The second operator+ overloading function takes an integer as input parameter and returns the sum of number of books of 'this' object and input integer. [5]

2.2 You need to define both the functions above but call any one of this operator+ overloading function in totalBooks(string name) to calculate and display total number of books of the given 'name' book. Define totalBooks(string name) [10]

2.3 Make a new option 't' in the menu to find total number of books of a book. In helper(), make an if-else case for option 't' and call `int totalBooks(string name)` there. [5]

```
Name: Intro to Java
5 books available in Noble library
Published in 08/2005

Name: Comp Arch
1 books available in Noble library
Published in Jan2012

Book name: Comp Arch
8 books available in Hayden library
Published in 05/2015

Please select one option:
a: Add a new book to the database
r: Remove a book from the database
c: Change the available number of books
t: Display total number of books of a book
n: Display new books (published 2010 or later)
d: Display all books in the database
s: Sort the list of books in the database
e: Exit and save the database in DB.txt
t

Please enter the book's name: Comp Arch
Total books = 11 ← 8 + 3
```
